# **TaHoma Switch Quick App - Addendum**

**Version: 1.7**

**Date: 11-05-2026**

## Introduction

To create a Somfy TaHoma API key (token), enable Developer Mode in the official app. This is required to locally control and integrate your blinds or roller shutters with home automation systems such as the FIBARO Home Center 3 (Lite) and/or Yubii Home (Pro) Gateway.

## Step-by-step guide for the TaHoma API

Follow the steps below to generate the local API and authentication token:

1. **Open the app:** Launch the TaHoma by Somfy app on your smartphone.
2. **Go to settings:** Open the Configuration of your installation menu and navigate to the parameters of your TaHoma box.
3. **Enable Developer Mode:** Tap the displayed PIN code of your gateway 7 times in quick succession (for example: 2001-1234-5678).
4. **Generate token:** Within the same Developer Mode menu, you can now generate and copy your API token or local key directly.
